Education

SRM University KTR

B.Tech in Computer Science Engineering

Chennai

2028

Amicus International School

class 12th, CBSE

Gujarat

2024

Personal Projects

Luxe E-Commerce Platform | [Live Demo](#) | [Github link](#)

December 2025

- Architected a multi-vendor marketplace using **Next.js 15**, **TypeScript**, **MongoDB**, and **NextAuth.js**, supporting User, Seller, and Admin roles with seller onboarding, Admin approval workflows, and access control.
- Integrated **Razorpay** payments, **Cloudinary** image management, and real-time order tracking, achieving a **99%** Lighthouse performance score while reducing image delivery latency by **40%**.

System Service Host - Privacy Browser | [Download](#) | [Github](#)

November 2025

- Engineered a stealth-focused browser using **.NET 9.0** and low-level **Windows User32 APIs**, leveraging **WDA_EXCLUDEFROMCAPTURE** to bypass screen recording detection.
- Created a "Camo Mode" using **runtime JavaScript injection** and a background **Process Radar** algorithm to monitor system threads and manage window visibility.

AI Research Studio | [Live Demo](#) | [Github](#)

July 2026

- Architected an autonomous multi-agent AI platform using **LangGraph**, **FastAPI**, and **CrewAI**, featuring a **Smart LLM Planner** with parallel agent execution, dynamic tool calling, and multi-provider LLM fallback.
- Implemented **Hybrid RAG** using **BM25**, **ChromaDB**, and **Cross-Encoder** reranking, alongside persistent **SQLite** memory, **GitHub repository analysis**, and real-time **SSE** streaming for document, web, and research.

VisionAssist AI | [Live Demo](#) | [APK](#) | [Github](#)

July 2026

- Developed a multimodal AI accessibility platform using **ViLT Transformers**, **PyTorch**, and **FastAPI**, integrating **Computer Vision (CV)**, **Natural Language Processing (NLP)**, and cross-modal reasoning for real-time visual question answering.
- Engineered an intelligent assistant with **Speech-to-Text**, **Text-to-Speech**, **EasyOCR**, **YOLOv8**, **Android**, and **Hugging Face**, featuring automatic AI intent routing for image understanding, text reading, and navigation.

UniversalPlantAI | [Live Demo](#) | [APK](#) | [Github](#)

June 2026

- Automated AI-powered plant disease detection platform using **TensorFlow CNNs**, **FastAPI**, and **React**, achieving **99.4% test accuracy** across **5 disease categories** for potato and apple leaf images.
- Deployed a cross-platform solution with **TensorFlow Lite**, **React Native**, **Vercel**, and **Google Cloud Functions**, delivering confidence-based diagnosis across web and mobile devices.

Technical Skills and Interests

Languages: Java, C++, C#, TypeScript, JavaScript, Python, SQL, C, HTML/CSS

Web Technologies: Next.js, React.js, Node.js, Express.js, FastAPI, Three.js, Tailwind CSS, NextAuth.js

AI & ML: TensorFlow, PyTorch, Computer Vision, NLP, Transformers, Multimodal AI, TensorFlow Lite

Game & Systems: Unity Engine, .NET 9.0, Windows User32 API, Multithreading, WebGL

Databases & Tools: MongoDB, SQLite, Mongoose, Git, GitHub, Vercel, Vite, Cloudinary, Hugging Face

Certifications & Achievements

Automate Data Capture at Scale with Document AI | [Google Cloud](#) | [Verify Credential](#)

Issued Dec 2025

- Built an end-to-end **AI-powered document processing pipeline** using Document AI to extract structured data from invoices and store results in **BigQuery** at scale.

Prepare Data for ML APIs on Google Cloud | [Google Cloud](#) | [Verify Credential](#)

Issued Dec 2025

- Prepared, transformed, and validated datasets for **machine learning APIs** using BigQuery and Dataflow, enabling reliable ML inference pipelines.

Streaming Analytics into BigQuery | [Google Cloud](#) | [Verify Credential](#)

Issued Dec 2025

- Implemented **real-time data ingestion and analytics pipelines** using Pub/Sub and Dataflow to stream data into BigQuery for low-latency insights.
